Medical
Inflatables

building healthier
communities through
fun, immersive
health education.

Disease prevention and early detection are best achieved through equitable, engaging, and accessible health education and screening for all communities. Our exhibits help organizations drive awareness, capture attention, and gain access, all in support of better patient outcomes.

Bigger, Better Health Education.

Improve Patient Outcomes with

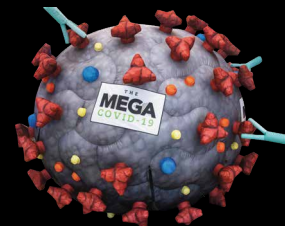

Mega Inflatables are interactive, walk-through models of the human anatomy and individual organs. Each features organ-specific health risks and the effects of disease, as well as preventative measures and treatment programs.

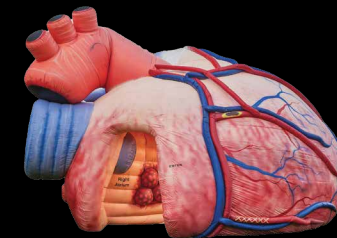

mega body

mega breasts

mega covid-19

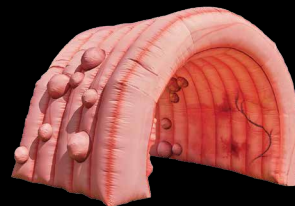

mega heart

Strategically placed LED lighting helps to internally light each display.

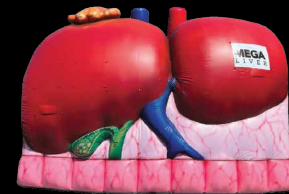

Informational signage in and on the exhibits highlights critical anatomy, medical problems, disease prevention measures, and the latest treatments.

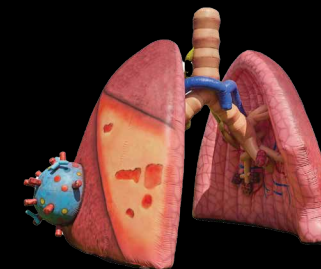

mega brain

mega colon

mega liver

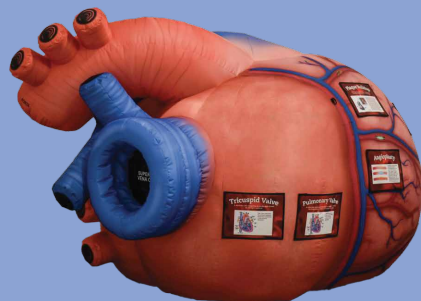

mega lungs

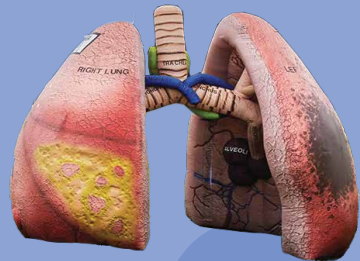

Eye-catching and educational, our one-of-a-kind exhibits are ideal centerpieces for health fairs and exhibits, hospital events, pharmaceutical or medical trade shows, fundraising walks, and more.

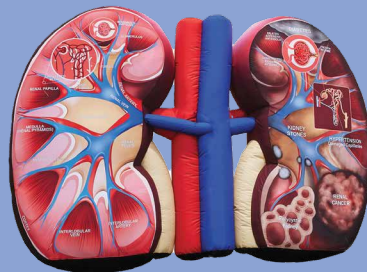

mini brain

mini heart

mini lungs

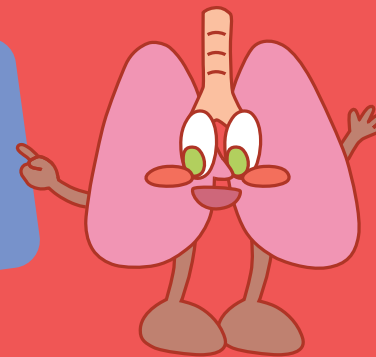

mini kidney

mega minis

MEGA Minis are scaled-down versions of our larger exhibits. The MEGA Minis collection features the same information that you see on the outside of our traditional exhibits.

Our clients have something to say!

"The MEGA Heart is a unique interactive tool, which displays the complex heart anatomy so that the general public can visualize the diseases that cause the greatest number of deaths in our society."

"Medical Inflatables has created a wonderful exhibit that shows both the beautiful harmony of form that serves the lung's function, and the disabling and sometimes destructive nature of some of our most common and feared lung diseases."

"The MEGA Heart is a great way to learn about heart health and heart function."

"The MEGA Brain is a wonderful tool for showing people of all ages the physiology, structure, and diseases that affect our body's most critical organ."
